P14: ventricular candidates on the acquired cardiac section

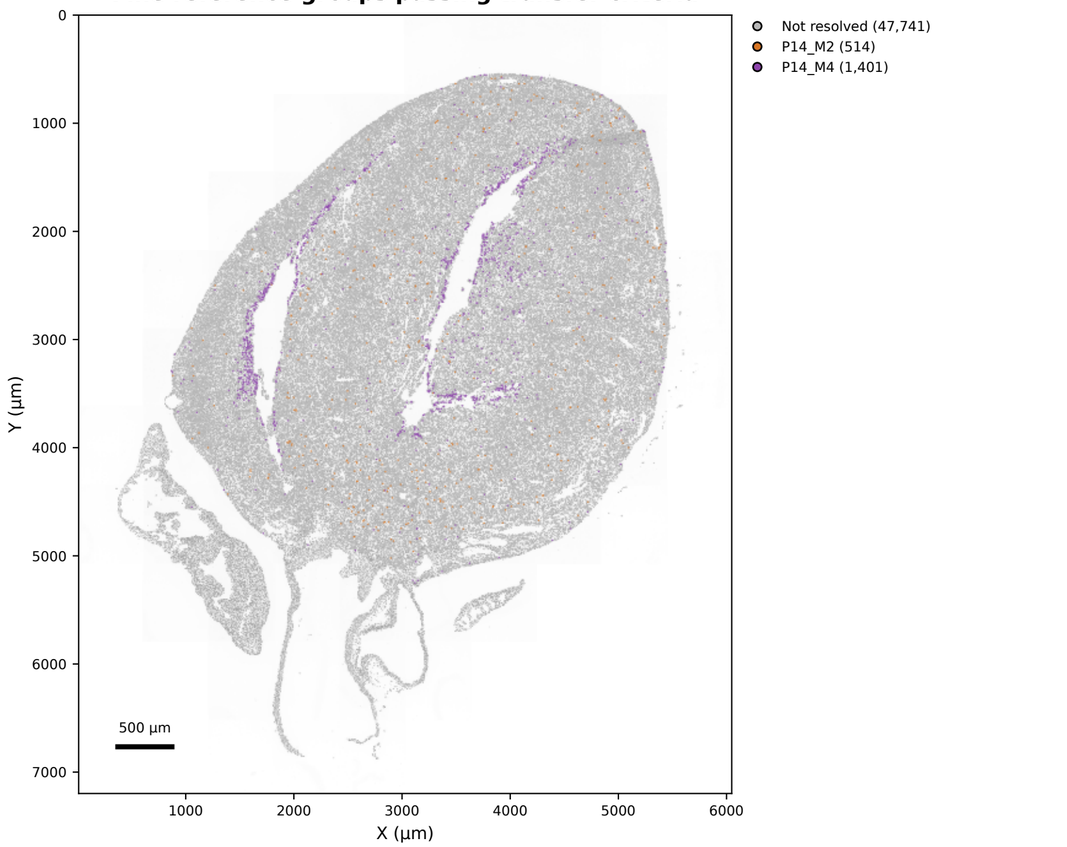

Measured-marker-supported lineage candidates

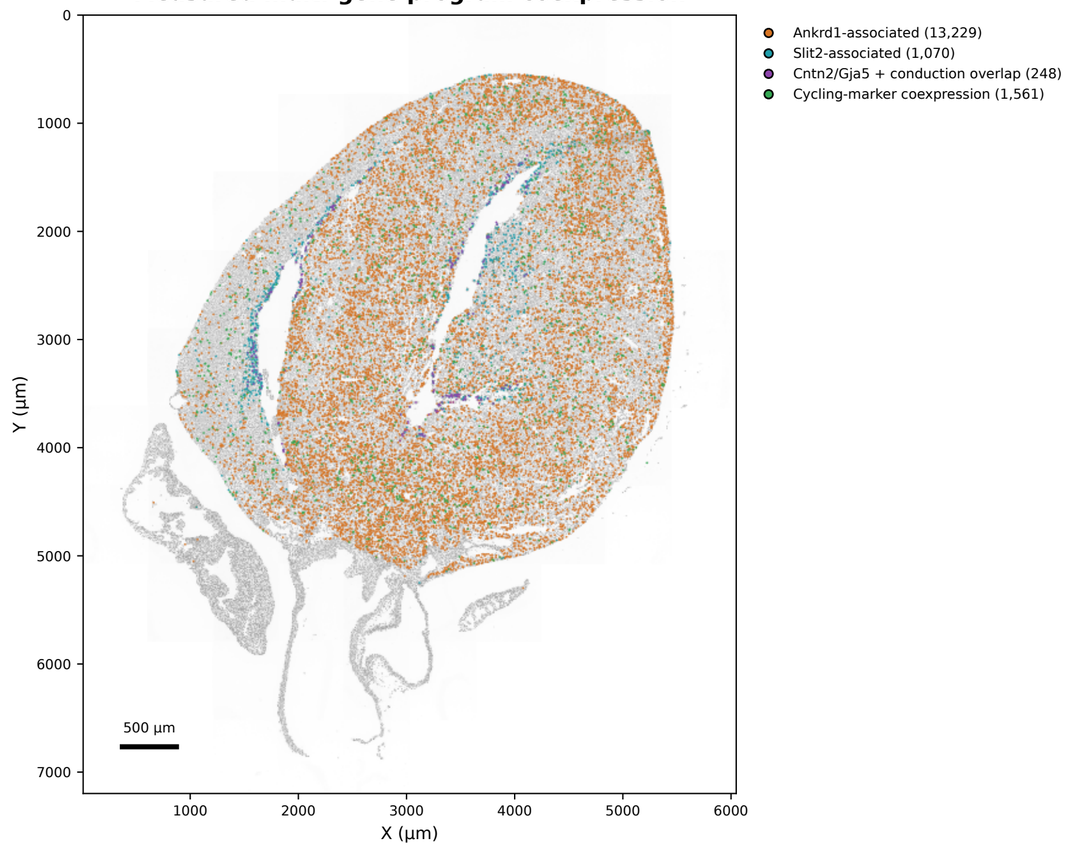

Ventricular program-family candidates

Fine reference groups passing transfer criteria

Measured multi-gene program coexpression

Gray image: acquired DAPI; colored points: original cell centroids. Candidate labels are reference-assisted, not anatomical or functional verification.
Fine assignments require panel/library/raw-reference agreement. Unresolved cells remain gray; measured program flags can overlap.
Kcnd2 and Irx5 are NOT assayed in this Xenium panel. No Kcnd2 expression, imputation or transmural coordinate is shown.
