P21: CytoSPACE assignments on native Xenium coordinates

Broad identities are supplied as input; subtype labels/fractions are not supplied. Native assignments are compulsory, not confidence-filtered.
Checks: same-stage reference-panel cross-library recoverability, 3 seeds, original counts, each reference library, expression fit and measured marker support.
Gray cells retain their original coordinates. Kcnd2 and Irx5 are unassayed; no measured electrical gradient is shown.
