P7: candidate spatial, oxygen-response and mechanical programs

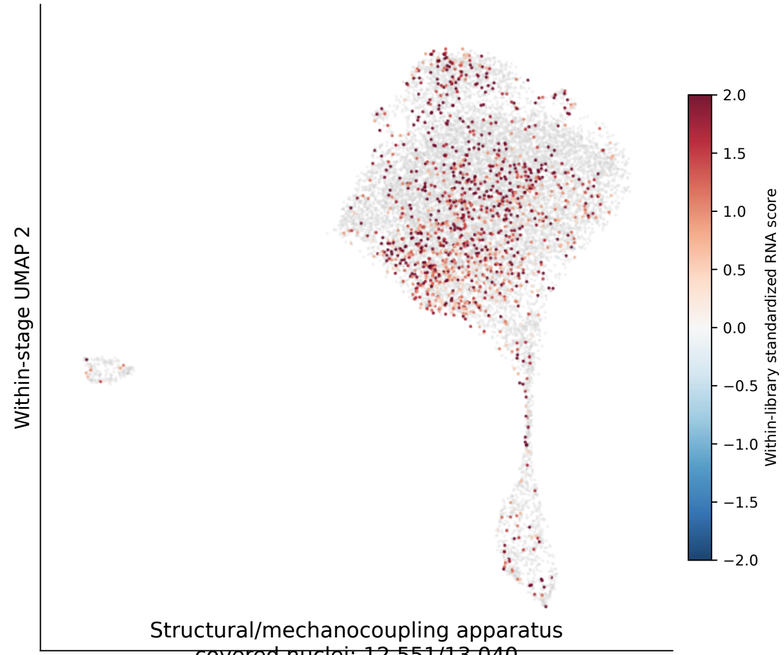

Slit2/trabecular-associated candidate
covered nuclei: 516/13,040

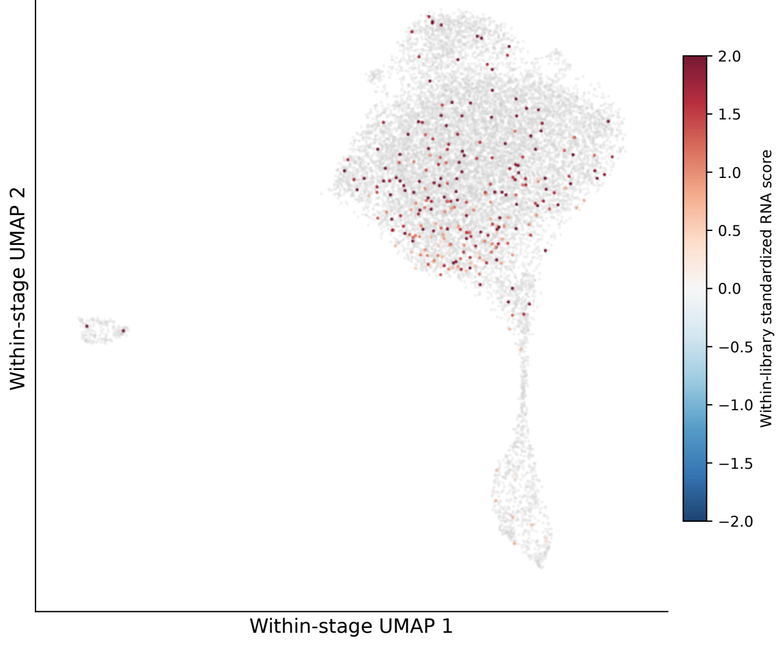

Ankrd1/mechanical-response-associated
covered nuclei: 10,798/13,040

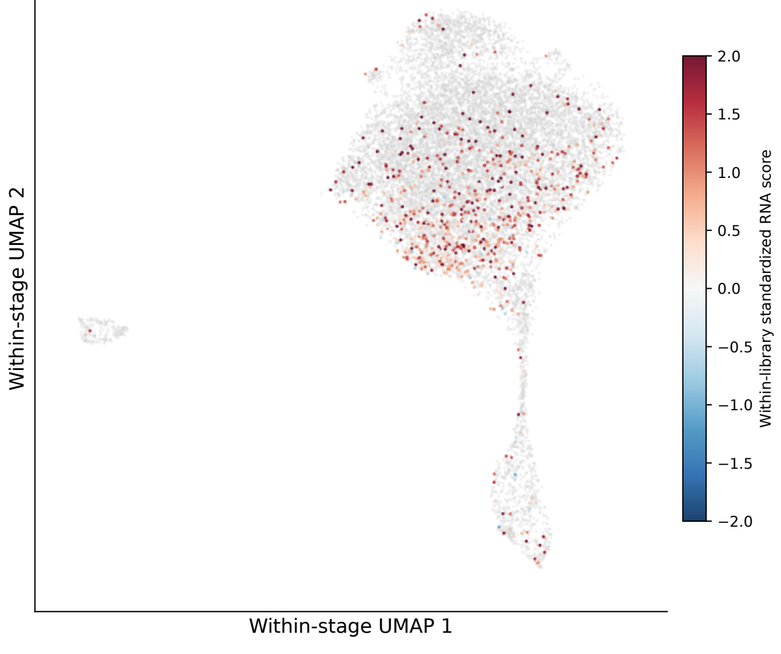

Ddc-associated ventricular candidate
covered nuclei: 1,302/13,040

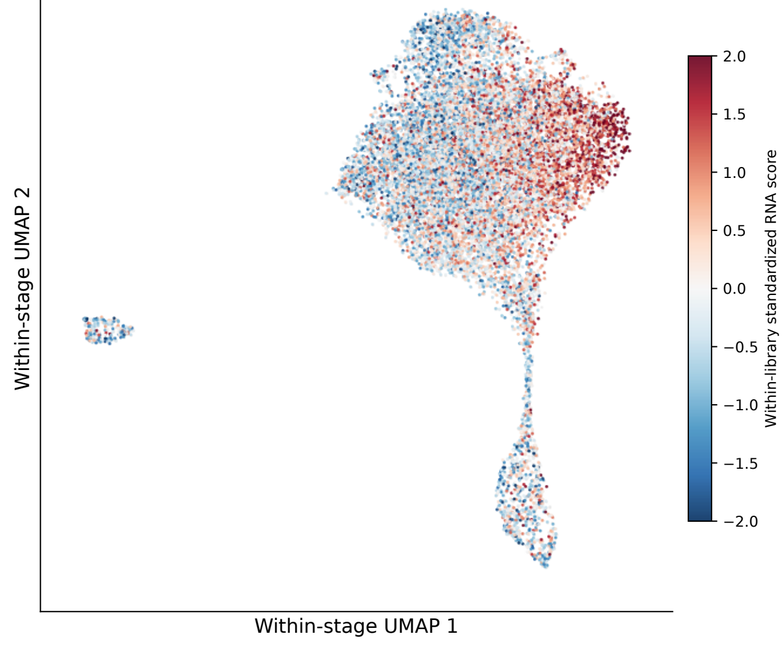

HIF-response non-glycolytic subset
covered nuclei: 274/13,040

Nuclear oxidative-phosphorylation genes
covered nuclei: 897/13,040

Structural/mechanocoupling apparatus
covered nuclei: 12,551/13,040

Same UMAP and axis limits throughout · Fixed color limits −2 to +2; scores are relative within libraries, not comparable oxygen measurements
Gray: nonfinite score or detected program-gene coverage <20% where coverage is supplied. Programs can overlap and form gradients.
RNA scores do not verify wall position, hypoxia, local force, or a discrete biological subtype.
