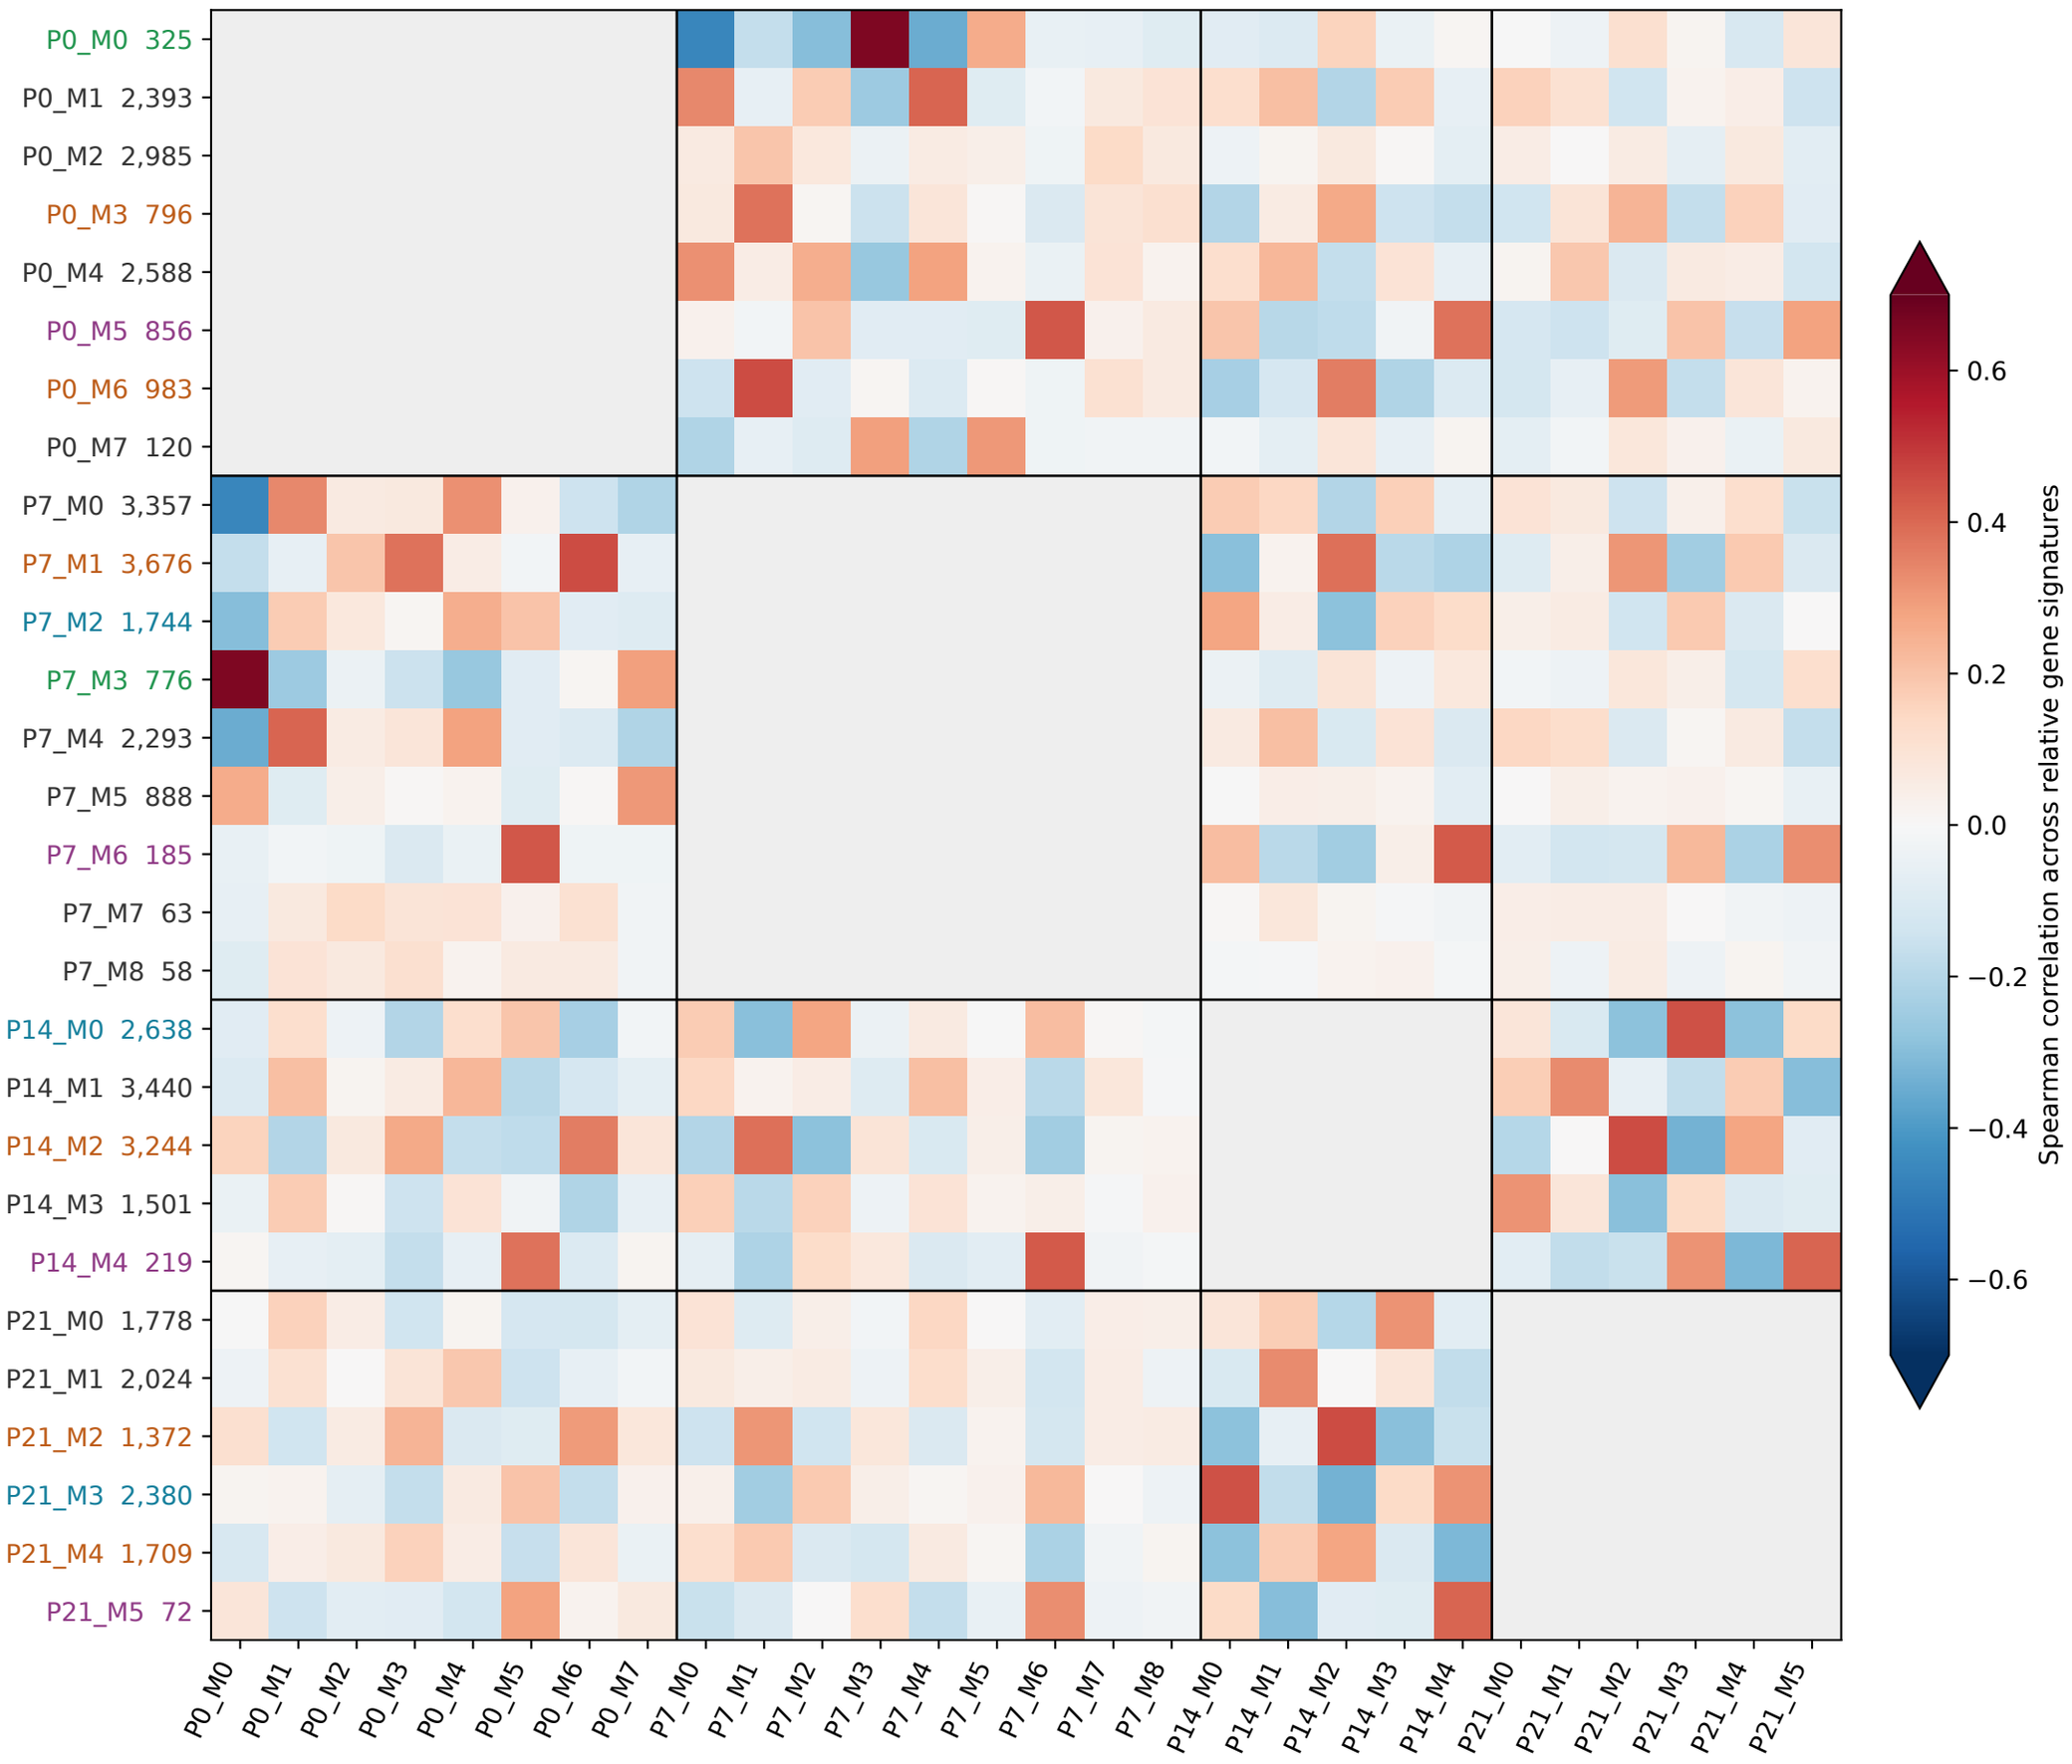
Relative gene signatures



Group count-sum log1p(CPM) minus same-stage remainder; descriptive resemblance, not lineage or differential expression.
Gray blocks mask within-stage comparisons. Numbers beside groups are retained nuclei; no forced one-to-one matches.
Orange: Ankrd1-associated; purple: conduction-program candidates; blue: regional electrical candidates; green: cycling.
Pooled signatures can reflect library weighting, age and stage composition. Small/marker-poor groups retain their review flags.
