P14: candidate spatial, oxygen-response and mechanical programs

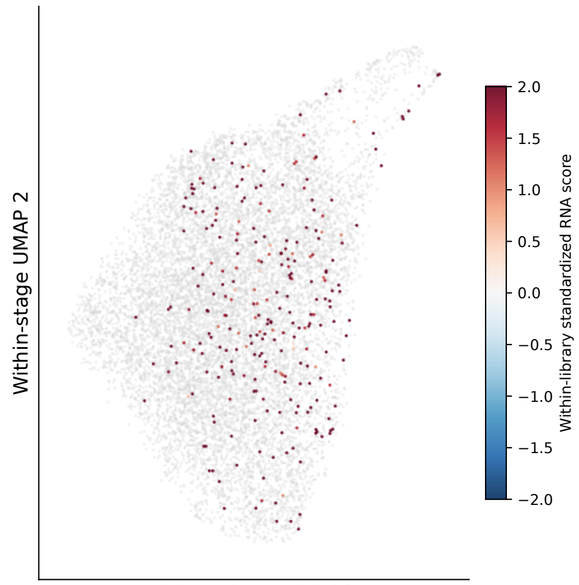

Slit2/trabecular-associated candidate
covered nuclei: 1,496/11,042

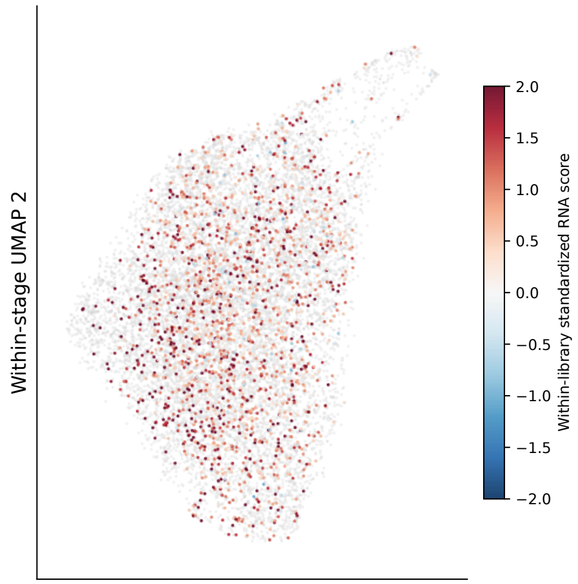

Ankrd1/mechanical-response-associated
covered nuclei: 10,446/11,042

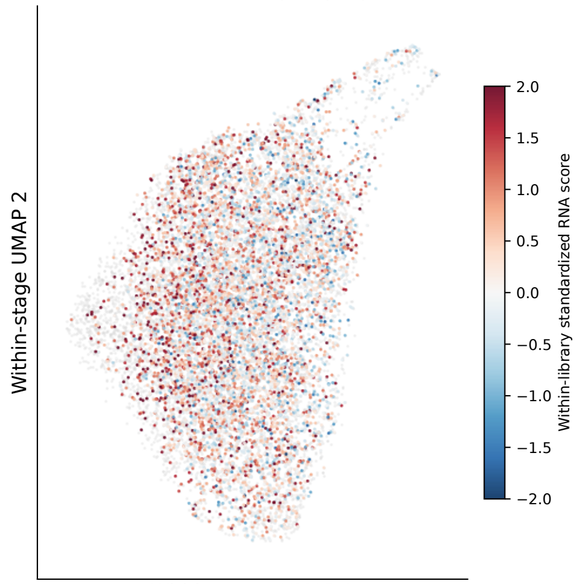

Ddc-associated ventricular candidate
covered nuclei: 262/11,042

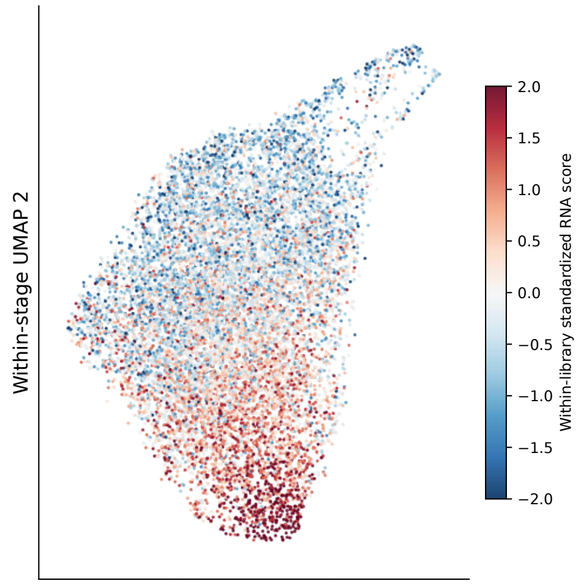

HIF-response non-glycolytic subset
covered nuclei: 2,088/11,042

Nuclear oxidative-phosphorylation genes
covered nuclei: 6,131/11,042

Structural/mechanocoupling apparatus
covered nuclei: 10,996/11,042

Same UMAP and axis limits throughout · Fixed color limits −2 to +2; scores are relative within libraries, not comparable oxygen measurements
Gray: nonfinite score or detected program-gene coverage <20% where coverage is supplied. Programs can overlap and form gradients.
RNA scores do not verify wall position, hypoxia, local force, or a discrete biological subtype.
